

DLT SOLUTIONS

Key Benefits

Cost effective way to leverage the value of imagery within your Autodesk or Google investment

Easily deployed into Autodesk and Google geospatial products

Licensed for sharing with all small government departments

Accurate and authoritative compared to free imagery data

Supports GIS data management and analysis for government operations, preparedness, and response activities

Event option enables specific planning around unique events

GeoEye Metropolitan Imagery Subscription Service for Geospatial Communities

High-resolution imagery is a key component of GIS. Analyzing imagery over time can provide unique insight into our changing world. The GeoEye Metropolitan Imagery Subscription Service offers Autodesk® and Google™ government users a cost-effective and easy way to procure accurate and authoritative imagery from GeoEye's extensive archive.

The GeoEye Metropolitan Imagery subscription service offering includes:

- A 3-year Service License Agreement (SLA) billed annually that provides customers access to GeoEye's high-resolution archive imagery delivered via online OGC Web Services. GeoEye's Online Access Services allows users to access precise imagery products in a timely fashion.
- Imagery delivered will be "best available view" for .50- or .82-meter resolution orthorectified imagery products.

Additional options offered:

- A New Collection Option if no archive data is available or a customer desires imagery scheduled update. New imagery can be ordered on a scheduled or priority basis.
- An Event Option for emergency response or event planning insures receipt of new imagery capture on an as needed basis. See Metropolitan Imagery subscription service features on reverse side.
