Simplifying Public Sector Data Center and Cloud Monitoring

Virtualization technologies, the cloud, and an increasingly mobile workforce is transforming public sector IT at an unprecedented pace. Yet just as mandates, regulations, and the C-Suite demand greater efficiencies in IT, budgets remain flat.

In order to address these challenges, the pressure and opportunity to modernize IT through greater automation and efficiency has never been more pertinent.

As public sector organizations look to meet their modernization challenges head-on – DLT Solutions and ScienceLogic are there.

Complete Hybrid IT Monitoring

Data center consolidation and the migration of operations and compute resources to private and public clouds – are all evidence that today's government and higher education institutions are already working faster, leaner, and smarter.

But while virtualization and the cloud brings flexibility and efficiency, managing today's complex hybrid IT infrastructure is hard. The combination of public and private – mixed with hosted services and legacy on-premises infrastructure – presents a complex environment for IT to run and operate.

ScienceLogic's hybrid IT monitoring solution can help. By delivering total infrastructure visibility from a single console, the ScienceLogic platform is a proven solution for managing cloud resources – out-of-the-box. A comprehensive and integrated IT operations management solution, ScienceLogic delivers:

- Complete Automated Monitoring – Event management, alerting, and runbook automation for power, network, storage, servers, applications, and the public cloud.

- Discovery and Dependency – Account for and monitor every device and environment, including Amazon Web Services (AWS), giving you a holistic view in one place.

- Dashboards and Reporting – Customizable, intuitive dashboards and reports provide a simplified view into infrastructure performance, allowing secure, partitioned views for multiple stakeholders.

- PowerApps – Supercharge your deployment with 1,500 add-on applications. Monitor just about anything in your environment.

- Ticketing and Asset Management – Single-system secure automated ticketing solution with multi-tenant capabilities.

Monitoring Coverage for All of Hybrid IT

- Discover and Map – Keep track of your entire hybrid IT infrastructure even when half of it is in the cloud.

- Adopt and Migrate – Accelerate cloud adoption without increasing risk and move workloads to the cloud faster.

- Run and Operate – Deliver IT service-based views in a hybrid IT environment. Adapt legacy monitoring tools to support a hybrid infrastructure.

- Stay Compliant – Meet FISMA requirements and maintain security of federal information systems by automating monitoring processes.

ScienceLogic

A Proven Solution for Managing Cloud Resources

ScienceLogic supports multiple deployments and needs:

- Public Cloud and Shared Services Monitoring – From IaaS to SaaS deployments, ScienceLogic provides IT availability and end-user experience monitoring for your organization's outsourced compute, shared services, and other hosted resources.
- Private Cloud Monitoring – Monitor your private cloud platform with a broad set of features, including virtualization, monitoring, chargeback tied to resource consumption, a services catalog, and automated provisioning for on-demand compute requests.
- Hybrid Cloud Monitoring – Get more from your combined investments with a single monitoring solution for cloud and physical data centers, while staying on top of your rapidly evolving cloud and virtualization needs.
- Tool Consolidation – Consolidate all your IT management tools on one platform and standardize monitoring for distributed operations – all via a single customizable dashboard for at-a-glance views of service level, risk, availability, and health.

The DLT Cloud Solutions Advantage

Cloud computing is often a challenging technology to visualize and the same solution doesn't work for every organization.

DLT's Cloud Solutions team understands the challenges involved with implementing cloud solutions, and provides our customers with the deep knowledge and expertise required to architect, deliver, and manage a cloud solution that fits their unique needs.

The DLT advantage includes strategic partnerships with cloud management vendors, like ScienceLogic, as well as leading IaaS, SaaS, and PaaS vendors, whose products and services can be easily procured through DLT and our broad portfolio of government contracts.

Procuring ScienceLogic and DLT Cloud Solutions

DLT Solutions holds many federal and state contracts, some of which are exclusive, and has established experience with many civil, intelligence, defense, state and local agencies as well as education institutions making the purchase of cloud solutions easy.

- GSA IT Schedule 70
- Internet2 NET+
- National Cooperative Purchasing Alliance (NCPA)
- NITAAC CIO-CS
- SEWPV
- VASCUPP AWS

- King County Amazon Web Services
- Maryland COTS 2012
- Texas DIR for Amazon Web Services
- New Mexico IT Technical Services
