Cloud Services for Higher Education and Researchers

Advanced cloud technologies are key to transforming higher education and research. Moving to the cloud isn't just an IT issue, leaders need strong processes and technical standards to provide for broad and rapidly growing user needs. To address this requirement, a secure and reliable platform is available for institutions to meet demands and provide an entire portfolio of trusted cloud solutions at scale.

Internet2® has partnered exclusively with DLT Solutions to provide higher education campuses with a custom program to access Amazon Web Services (AWS) via the Internet2 NET+ initiative. This NET+ AWS by DLT program provides key enhancements to the standard AWS terms currently offered to higher education and research communities, and makes it easier to procure AWS by eliminating many of the timeconsuming customary contract negotiations.

This custom cloud solution provides benefits to faculty, staff, researchers, administrators, and institutional accounts:

- Leverage transformational tools to enhance academic and research pursuits of users
- Drive enterprise costefficiencies with total costs and budget constraints
- A scalable and agile platform that can handle growing requirements
- Secure and reliable access and identity management
