

# SOLARWINDS ENSURES SECURITY THROUGHOUT YOUR IT INFRASTRUCTURE.

Help secure your environment by combining **performance** and **security** data.

SolarWinds  
Security Information  
& Event Management

*Security isn't something that can be done in a silo. It takes knowledge of your entire infrastructure and the right assets to secure them properly. SolarWinds can help manage threats by providing powerful and easy-to-use software for performance management and integrated security across all platforms.*

## MONITOR YOUR ENDPOINTS

**Patch Manager** helps ensure servers and workstations stay up to date with the latest software patches and identifies where you might have a weakness on your endpoints.

[solarwinds.com/patch](https://solarwinds.com/patch)

**Secure Managed File Transfer Server** lets you securely transfer files across your organization with ad-hoc or scheduled transfers (with audit trails)—and tracks security & compliance requirements. [solarwinds.com/smft](https://solarwinds.com/smft)

**User Device Tracker** gives you important endpoint monitoring by tracking where devices currently are, and how they have historically connected to the network—including what user was logged into a machine at a certain time. [solarwinds.com/udt](https://solarwinds.com/udt)

## MONITOR YOUR APPLICATIONS & DATABASE

**Server & Application Monitor** monitors servers and applications to ensure no service degradation has occurred. You can also use the performance data collected from applications to spot security attacks and breaches.

[solarwinds.com/sam](https://solarwinds.com/sam)

**Database Performance Analyzer** uses response time and forensic trending across days, months, or years, and features baselines and reports to help identify performance and security anomalies in databases such as MS SQL, Oracle, DB2, and more. [solarwinds.com/dpa](https://solarwinds.com/dpa)

## MONITOR YOUR SYSTEMS

**Virtualization Manager** helps identify the root cause of problems in minutes by quickly drilling into the app, server, virtual, and storage layers to troubleshoot performance issues. [solarwinds.com/vman](https://solarwinds.com/vman)

**Storage Resource Monitor** gives you visibility into storage utilization and performance problems and is expandable to see the VMs and applications that are dependent on any storage element. [solarwinds.com/srm](https://solarwinds.com/srm)

## MONITOR YOUR NETWORK

**Firewall Security Manager** evaluates your firewall configurations to identify areas for optimization and logic flaws in your rules. [solarwinds.com/firewall](https://solarwinds.com/firewall)

**Network Configuration Manager** helps ensure network configurations consistently comply with industry and internal best practices, as well as industry regulations and compliance requirements. [solarwinds.com/ncm](https://solarwinds.com/ncm)

**NetFlow Traffic Analyzer** shows you how clients are behaving and helps you find abnormal behavior. [solarwinds.com/netflow](https://solarwinds.com/netflow)

## BRING IT ALL TOGETHER

**Log & Event Manager** combines data from all servers, network devices, applications, and security appliances in your infrastructure and helps identify critical events. By linking a real-time event correlation engine, event normalization, and out-of-the-box rules & reports in a simple to use virtual appliance, SolarWinds' SIEM gives you seamless IT security in your environment.

## TRAIN YOUR USERS

Educating end users is a crucial and continuous process. We provide educational materials on how to use the tools you have, train users, and improve your IT security.

Visit [solarwinds.com](https://solarwinds.com) to check out interactive demos and download FREE trials.
