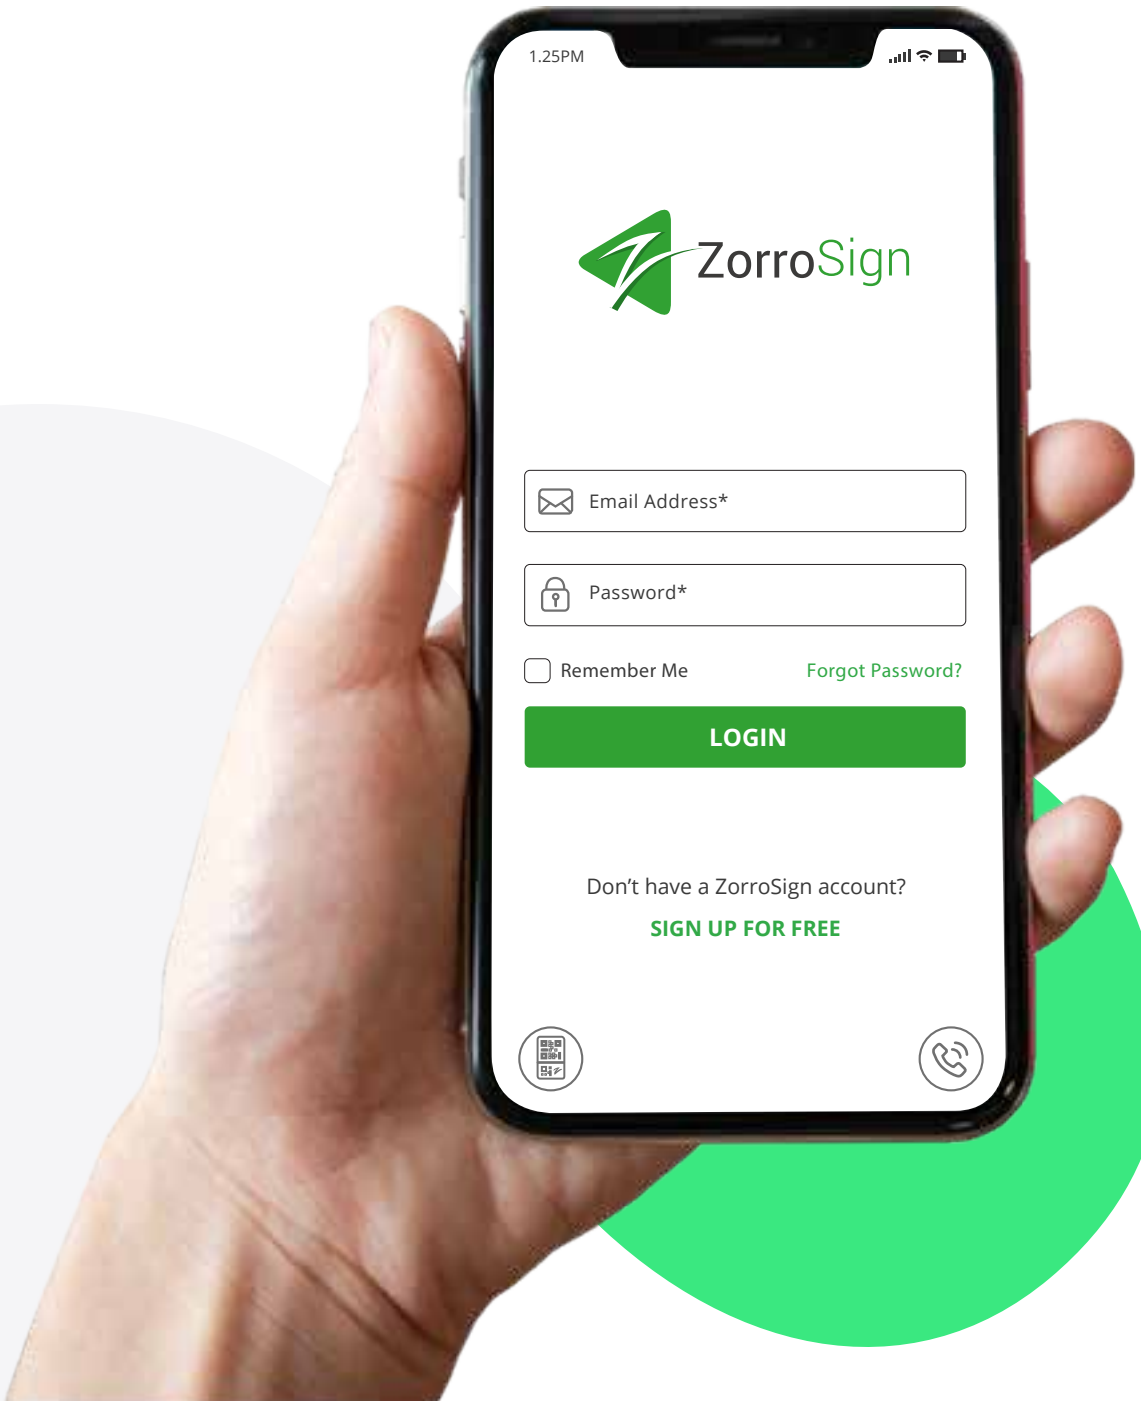
ZorroSign

Ultimate Security and Efficiency in Signing Documents



Today's businesses are under tremendous pressure to reduce costs and increase efficiency and productivity. ZorroSign's Digital Business Platform is the solution that enables immediate, measurable results.

COMPONENTS OF ZORROSIGN

One Platform, Complete Solution.

A unified Digital Business Platform that enables businesses to transform paper based processes into paper-less solutions. Core focus on user privacy, data and document security and signer validation and authentication with the patent pending 4n6 (Forensics) Token.

ADVANTAGES OF ZORROSIGN'S DIGITAL BUSINESS PLATFORM

Save Money
Immediate Return on Investment (ROI), which includes both hard & soft monetary costs by getting rid of paper, printing, sending by courier, and subsequent archiving.

Save Time
Never lose a document, find and access your documents in seconds.

Increased Security
User data, executed documents and forms, and transaction details are secured using PKI infrastructure and stored on the blockchain.

Sanctity
Ensure your documents were not tampered with, revised, revoked or cancelled.

4n6 (FORENSICS) TOKEN

The 4n6 (Forensics) Token is a patent pending tamper seal that secures and authenticates documents.

ZorroSign uses permissions-based private Blockchain technology to ensure the security and privacy of the users' information (who are part of a transaction), the data and also to ensure the sanctity of digitally signed documents using RSA encryption. ZorroSign detects tampering and signature forgery of electronically signed documents through its proprietary software and patent pending 4n6 (Forensics) Token. It provides chain of custody, full audit trail, and a number of additional attributes and characteristics about a document.

The document owner can assign permissions such as view, validate and deny access to the main document and its attachments. 4n6 (Forensics) Token is the multipurpose bridge which can comprehensively validate both electronic and paper documents. When challenged or investigated it can be used as evidence without repudiation in a court of law.

4n6 (Forensics) Tokens cannot be altered, pasted or forged onto another document. If a deliberate act is carried out, the 4n6 Token when read will show the original intended valid document.
