clarifai

Enable early warning and operational insight with Computer Vision AI

- Detect patterns and anomalies quicker with less effort
- Cut costs by maximizing resources
- Reduce human error and rework

Easily deploy AI for actionable results

Automate oversight of supply chain logistics to increase visibility into operations. Detect anomalies to lower costs, reduce human error, and prevent future issues.

Improve inspection efficiencies

Augment your inspection process through AI automation. Deploy models at the edge to remotely survey, classify, and detect outliers. Improve safety through equipment, facility, and product standard compliance.

Detect fraud and mitigate risk

Uncover suspicious activity through behavioral pattern detection. Quickly sort and filter visual data at scale to improve investigation efficiency. Reduce false positives to ensure attention is spent on what matters most.

Ensure public safety

Build detection models to proactively alert and track anything of interest (e.g. people, weapons, crowds, vehicles). Deploy on cameras at the edge or existing VMS platforms. Use real-time or for forensic analysis.

Prevent equipment downtime and failures

Reduce equipment downtime using predictive maintenance and improve asset utilization. Add an additional level of inspection to your manual processes and extend the life of assets through better care.

FORRESTER®

"A pioneer in deep learning-based computer vision, Clarifai can tackle near real-time visual search, facial recognition use cases, and deployment in the most secure, air-gapped environments that nearly all other vendors can't match."

The Forrester New Wave™: Computer Vision Platforms

AI Lifecycle
End-to-end enterprise platform

Portal
Intuitive UI for the most crucial AI tasks

APIs
Developer tools for fast AI adoption and integration

AI Fabric
Agnostic and scalable deployment

Services
AI-experts to solve your biggest challenges

1 **Build**
Utilize our prebuilt templates, custom build, or bring your own models.

2 **Label**
Quickly bulk label data using our annotation tool to create concepts.

3 **Search**
Filter results by concept, image, metadata, or geolocation.

4 **Train**
Teach the model to process its own predictions on your custom concepts.

5 **Predict**
Output probability scores for each concept in your model.

Build and train AI models faster

Our platform is designed for all skill levels, not just coders. Users can quickly build custom models using any type of image or video data. Create mission specific concepts for faster and more comprehensive results. Deploy on premise, in the cloud, or at the edge to generate predictions.

WHY CLARIFAI

Clarifai is the leading independent AI platform for computer vision. Government agencies trust Clarifai to help them get value from their image and video data. Visit clarifai.com/public-sector for more information.
