

Covid-19 ▶ Network Change ▶ Misconfiguration ▶ RISK

Misconfiguration is code for human error.
Covid-19 has only magnified this.

Up to Half the World's Workforce is Now Working Remotely

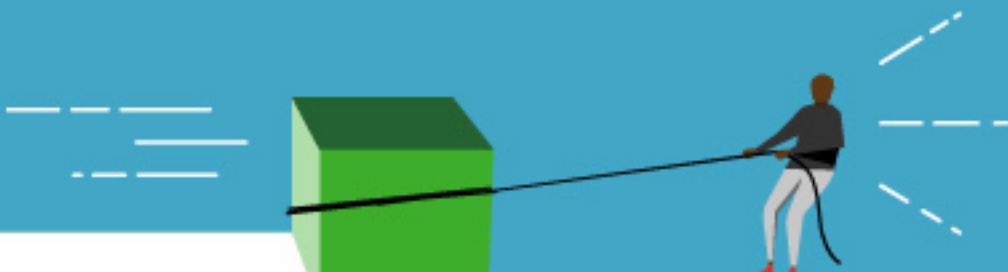

80M
United States

114M
Europe

IT Needed to Act Fast to Adapt

160%
Increase in US VPN usage
—statista

300%
Increase in enterprise infrastructure change
—FireMon customer survey

The Need for Agility and Flexibility Accelerated the Move to the Cloud

775%
Increase in usage of its Azure cloud services due to Covid-19
—Microsoft

Rapid Change Leads to Human Error Leads to Misconfiguration Risk

424%
Increase in data breaches due to cloud misconfigurations
—IBM

And the Bad Guys are Attacking

99% Of all firewall breaches will be caused by misconfigurations
—Gartner

80% Increase in account take overs
—Px

26% Increase in web skimming
—Malwarebytes

350% Phishing attack increase
—Google

30% Increase in length of DDoS attacks and disruption risks as organizations accelerate Covid-19 remote working plans
—Link11

25% Spike in the number of "Zoom" domains registered and has seen malicious "Zoom" files targeting people working from home
—Checkpoint

125% Bad bot traffic increase
—Distill Networks

Automation is the Antidote

FireMon Automation helps create structure in the midst of change, and helps you ensure that best practices are in place so you can stay focused on what matters most: SECURING YOUR NETWORK.
