

# United States Attorney's Office Selects NetDocuments For Agency-Wide Cloud Document Management

December 14, 2021 | Salt Lake City, Utah

NetDocuments, the FedRAMP Authorized cloud content management platform where legal professionals do work, today announced that the Executive Office for United States Attorneys (EOUSA) selected the NetDocuments cloud platform for the United States Attorney's Office (USAO). USAO will initially roll out a number of NetDocuments Solutions including document and email management to 5,000 agency users.

The US Attorney's Office is comprised of 94 federal districts encompassing the 50 states and four territories. At full deployment, the solution will support 15,000 users. There is no law firm that big.

NetDocuments partnered with [DLT Solutions](#), a wholly-owned subsidiary of Tech Data Corporation and part of the TD SYNnex™ family, the premier government solutions aggregator that specializes in understanding the information technology (IT) needs of the U.S. federal, state, local and education markets, to provide streamlined and frictionless contracting, and to help seamlessly deliver NetDocuments to USAO.

NetDocuments was selected because of its commitment to the partnership and key functionality of the cloud platform including customizable workspaces with unlimited metadata fields; flexibility of users to create personal folders in the workspace; and other native capabilities of the platform unique to NetDocuments. Having these additional solutions natively in the platform was a key reason NetDocuments was chosen.

"We are proud to welcome EOUSA to the NetDocuments customer community and accelerate our momentum in the government sector," commented Josh Baxter, NetDocuments CEO. "USAO and other government agencies have unique and heightened security standards that only FedRAMP Authorized providers like NetDocuments can meet. Our partnership with USAO and the government sector at large is a testament to our commitment to dependable innovation and our state-of-the-art security."

According to the EOUSA selection committee, FedRAMP Authorization, attained by NetDocuments earlier this year, was an absolute requirement to proceed and ensure the security and integrity of USAO intellectual property and work product. The USAO identified a need for a secured, cloud-based, legally focused document management system and selected NetDocuments. EOUSA is in the midst of a multi-year deployment and will deploy NetDocuments to approximately 1/3 of its community by Fall 2022.

NetDocuments understands the focus on delivering unmatched security models to meet USAO's ever changing security landscape and workflow requirements. This is underpinned by its FedRAMP Authorization and USAO Authority to Operate (ATO) with all of the related security requirements, as well as adapting to the USAO's distinct culture and workflows.
