

# EXPAND BUSINESS OPERATIONAL EFFICIENCY

## Network as a Service (NaaS)

Quickly adapt to your business' evolving networking needs without purchasing or operating your own network infrastructure.

NaaS delivers scalable wireless and wired solutions offered through a cloud-based subscription model. Businesses can expand operational efficiency without owning, building, or maintaining their own infrastructure.

NaaS is a flexible way business can utilize enterprise network infrastructure to:

- ✓ Keep pace with innovation
- ✓ Meet rapidly changing business needs
- ✓ Optimize network performance and user experiences

## NaaS Advantages

- **Improved Performance** – NaaS uses an artificial intelligence (AI)-driven automation platform to make automatic upgrades and proactively detect and resolve service issues.
- **Enhanced Security** – the NaaS platform has smart, built-in security features to simplify network protection and support changing business needs.
- **Scalability** – expand or reduce network capabilities anytime.
- **Flexibility** – move away from a do-it-yourself model and being locked into a solution. NaaS easily adapts to changing business requirements and needs.
- **Cost Effective** – avoid expensive OpEx and equipment purchases required to build and maintain a network.

NaaS has the flexibility to add or subtract services like switches, firewalls and wireless access points, which are all included in a monthly subscription with zero upfront costs.

Can your business  
benefit from NaaS?

Need  
network  
scalability?

Have  
limited IT  
resources?

Need to focus  
more on business  
objectives?

NaaS offers a flexible, cost-effective and expertly managed solution for your network needs. It provides the convenience of outsourcing network services, allowing you to focus on mission-critical business applications and services.
