

Optimize data collection to fuel insights and decision making

Digitize your inspection and work order forms for oversight and analysis

Customizable Form Creation

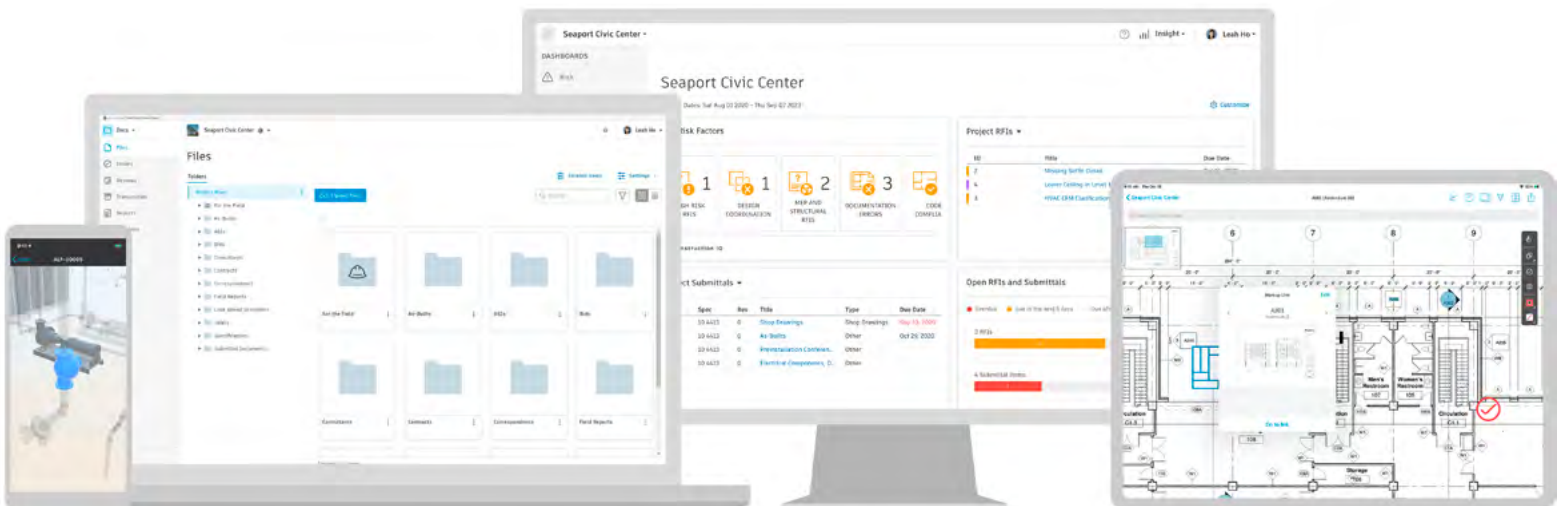

Use pre-built templates, import PDFs, or create your field reports from scratch. Once created, the templates and forms can be shared and adapted as needed.

Centralized Data Repository

All data collected from the field is stored, permissioned, and standardized to foster connection and collaboration with teams needing access to the information.

Enterprise Insights and Analytics

Utilize your form data to make data-driven decisions to protect against miscommunication, delays as well as looming quality or maintenance issues.

Document Reviews

Automate the review of documents before publishing and sharing with stakeholders

Photo Repository

Capture, reference, and share images collected from an inspection with stakeholders

Issue Workflows

Assign, track and resolve issues from within a field report on a mobile device in real-time

Mobile Access

Ensure teams have access to the right information, anytime, with auto-sync to mobile

Features At A Glance:

Dedicated mobile app with automated cloud syncing

Photo capture with custom data fields

Existing form conversion and custom checklist creation

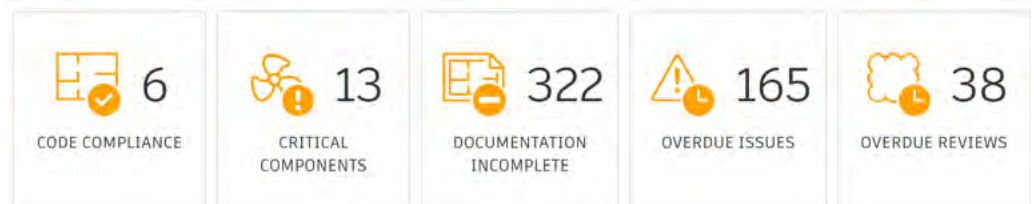

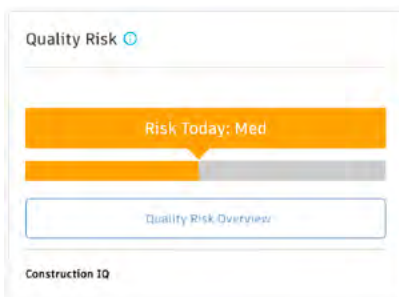

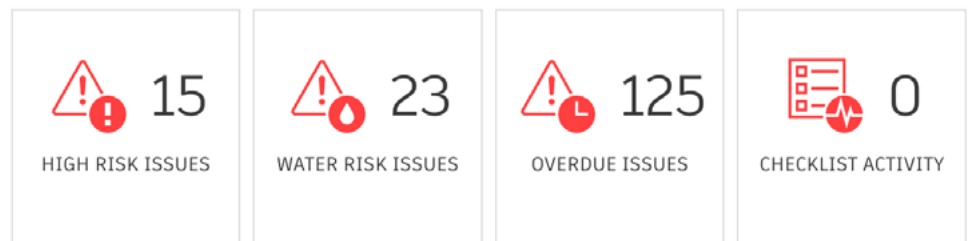

Data reporting and integration with business intelligence tools

Easily customize dashboards that surface high-risk problem areas

Performance Trends Made Easy

As your teams complete their inspections, Autodesk Build and our Construction IQ analytics service collect and analyze the data--serving up risk and compliance warnings automatically so you can visualize trends and make adjustments before they impact your bottom-line.
