

# Engage, Educate, and Empower with Accessible Video—Right Inside Blackboard

## A Scalable Video Solution Built for Government Learning Environments

**Anthology Video Studio** is the all-in-one video creation and sharing platform designed for instructors—not video editors. Now your agency can easily record, edit, and distribute secure, accessible training videos—without leaving the Blackboard LMS. It's simple, scalable, and built with public sector priorities in mind.

## Why Government Agencies Choose Video Studio

### Secure & Compliant by Design

- Browser-based—no downloads, no local installs
- Built-in keyboard navigation, UI cues, and screen reader support
- Captioning and transcripts powered by AWS, with alternate formats available via Anthology Ally
- Adaptive streaming for stable playback—even on limited connectivity
- Videos do not count toward Blackboard storage entitlements

### No Extra Systems to Manage

- No separate implementation or user credentials
- No third-party software, integrations, or costs
- Simple, transparent licensing—unlimited users, streaming, and storage\*
- Minimal IT involvement for setup and support
- Video analytics powered by **Anthology Illuminate**

### Results-Focused Video Engagement

- Track video views, engagement time, and audience insights
- Quickly identify which content is working—and where learners are dropping off
- Use video data to improve program delivery and training effectiveness

## Make learning more inclusive and engaging

With Video Studio, ease of use extends to the learner experience. Video Studio was created with accessibility in mind, ensuring students enjoy a seamless, inclusive interaction with video content.

Editable, automatic captions and transcripts powered by AWS

Downloadable video transcripts in alternative formats via [Anthology Ally](#)

Adaptive streaming adjusts video playback to ensure a smooth viewing experience regardless of internet speed

Track video engagement with robust analytics, including video counts, unique viewers, average watch time, and total watch time

## Made for Government Learning. Ready for Real-World Demands.

Blackboard Video Studio empowers government agencies with 360-degree video and immersive VR experiences—unlocking new ways to train personnel, simulate real-world environments, and deliver high-impact learning.

From emergency response simulations to complex equipment walkthroughs, immersive video helps agencies overcome the limitations of distance, cost, and safety—bringing critical lessons to life in a fully accessible environment.

### Why it works for agencies:

#### **360° Playback for Realistic Scenarios**

Trainees can explore content from every angle using drag, tilt, or keyboard navigation—ideal for mission rehearsals, situational awareness, or facility tours.

#### **One-Click VR Handoff**

A simple six-digit code connects learners from Blackboard directly into a fully immersive VR experience—without any complex setup.

#### **Built for Accessibility**

With hotkey navigation, screen reader support, and clear visual cues, Video Studio ensures that all learners—including those with disabilities—can fully engage in the experience.

Whether you're training in defense, emergency management, law enforcement, or compliance, Video Studio delivers immersive, accessible, and effective learning—ready to scale across your agency.

We heard from instructors that creating video and audio content for their courses is an area where they're spending a lot of time, so in the spirit of making course creation as easy as possible, we explored how we could create a seamless experience that allowed them to do this efficiently, and without having to leave the LMS.
