

IP Defense

Comprehensive Security for Every Device

ThreatSTOP IP Defense delivers automated, cloud-controlled protection for your TCP/IP-based devices, including routers, firewalls, switches, load balancers, and IDPS. With real-time updates from over 1,000 third-party threat intelligence sources and our in-house ThreatSTOP Security, Intelligence, and Research Team, IP Defense preemptively blocks malicious IPs before they breach your network and prevents your network from communicating with them, ensuring your devices remain secure and fully prepared for the newest threats.

✓ Features And Benefits

Seamless Device Integration:

- Deploy ThreatSTOP security on nearly any IP-based device, including next-gen firewalls (NGFWs), routers, switches, and load balancers.
- Utilize customer-specific block and allow lists for highly adaptable firewall protection.

Automated Security Gateways:

- Transform your TCP/IP devices into automated security gateways with advanced IP blocking.
- Instantly drop or redirect malicious IPs or CIDR ranges before they can inflict damage.

Continuous Threat Intelligence Updates:

- Stay ahead of emerging threats with 24/7 policy updates powered by over 1000 human- and machine-curated threat intelligence feeds, developed by both 3rd parties and 1st party intelligence.
- Gain valuable telemetry for your Security Operations Center (SOC) or Managed Security Service Provider (MSSP).

Predictive Policy Customization:

- Customize firewall policies to match your organization's security posture.
- Support for your custom, in-house, or third-party threat intelligence feeds to enhance protection.

Advanced Reporting Tools:

- Analyze network security and track threats with powerful reports accessible in the ThreatSTOP portal or your SIEM.
- Identify infected hosts quickly and research threats using Check IOC and other valuable research tools.

Optimized Network Efficiency:

- Reduce unwanted bandwidth usage and the load on your existing security layers.
- Minimize endpoint infections, ensuring uninterrupted network productivity.

Cost-Effective and Easy to Manage:

- Eliminate the need for new equipment with a flexible, cloud-native solution.
- Automate and outsource essential security policy updates, saving time and resources.

Why Choose ThreatSTOP IP Defense?

With ThreatSTOP IP Defense, your IP-based devices become formidable barriers against malware, ransomware, phishing, and other cyber threats. Harness the power of our curated intelligence, seamless device integrations, and automated policy updates to safeguard your network perimeter and internal infrastructure.
