

# DLT Solutions and Amazon Web Services

## The DLT Solutions and Amazon Web Services Advantage

DLT Solutions, a Premier Consulting Partner for Amazon Web Services (AWS), enables organizations to securely migrate into the cloud seamlessly and efficiently to meet their unique requirements. DLT's contracts include AWS offerings across multiple AWS Regions, including AWS GovCloud (US). The AWS regions incorporate all of the same security controls and are Federal Risk and Authorization Management Program (FedRAMP) certified to the FISMA moderate level. Additionally, the AWS GovCloud (US) framework adheres to International Traffic in Arms Regulations (ITAR). AWS GovCloud (US) provides a cloud option to DLT's government customers who need an additional level of regulatory compliance.

DLT offers many federal and state and local contract vehicles to make procuring AWS simple and cost-effective for government and higher education institutions, thus enabling the ability to spin-up hundreds or thousands of servers and storage in minutes, reducing delivery time to constituents and staff. To simplify procuring cloud solutions DLT offers the following procurement vehicles:

- GSA IT Schedule 70
- NITAAC CIO-CS
- National Cooperative Purchasing Alliance (NCPA)
- Internet2 NET+
- SEWP V
- Texas DIR

## Let DLT Solutions Help Your Organization Get Started

No matter what phase of cloud adoption your organization is in, DLT can provide the expert architectural and technical direction you need to select the appropriate Amazon Web Services products.

## DLT Solutions and Amazon Web Services partnership provides the following cloud solutions:

### Enterprise Applications

AWS offers a reliable and secure cloud infrastructure platform that enables agencies to quickly deploy and run enterprise applications.

- Built for enterprise security standards
- Lower total cost of ownership (TCO) for your applications
- Easily connect existing datacenter

### BigData

AWS provides secure scalable infrastructure solutions that agencies can use to cost-effectively store, mine, manipulate and analyze large data sets, aptly termed Big Data.

- Easily provision storage, computation, and database services
- Reduce queries with a powerful Hadoop framework
- On-demand access to terabytes of scalable storage

### High Performance Computing

AWS helps the public sector solve complex science, engineering and business problems using secure High Performance Computing.

- Lower cost with On-demand, Reserved or Spot instances
- Elasticity with compute resources for

### Disaster Recovery and Archive

AWS provides a set of services that enable secure rapid recovery of your IT infrastructure and data, any time and from anywhere.

- Enable rapid recovery with eleven 9s of durability
- Eliminate hardware, software, and capacity planning with archiving
- Effortless data replication

### Web Applications

AWS provides a secure on-demand access to scalable web and application servers, storage, databases, content delivery, cache, search and other application services that make it easier to build and run apps.

- Easily deploy and maintain apps
- Choose your own programming language
- Root access to either Linux or Windows instances
